-  *Custom Software Development*
-  *Enterprise Mobile Apps*
-  *Business Intelligence*
-  *IoT Apps & Hardware Development*
-  *RFI Solutions*
-  *Managed IT Services*

ABOUT WES

WES is a technology consulting company focused on providing state-of-the-art technology services and solutions to organizations from any industry. Since our foundation, we have remained dedicated to helping clients to build stronger businesses through technology innovations.

Driven by honesty and transparency, we ensure that every service we sell has a positive impact on our customers.

Our integrated team of enthusiastic and dedicated professionals understands that execution is the key to a successful business. Therefore, we work tirelessly to ensure that every project is delivered with the highest quality. Our objectives are achieved from a philosophy built around people, quality, and service.

CUSTOM SOFTWARE

WES is dedicated to assist businesses with their unique needs by providing complete value-added Custom Software Development Services

We select the best Technologies and Methodologies for carrying each project, by applying these methods, we built applications that ensure, scalability, flexibility, maintainability, and security.

How we do it

Our approach focuses on maximizing performance while minimizing risk and costs. Our development approach starts by working closely with the client collaboratively collecting requirements to identify and understand project vision and goals.

The next step is to set clear requirements and objectives; it is important that the team has a good fundamental understanding of the project requirements to get to know the real story behind the project vision.

Our Development Process

Discovery & Analysis

During this phase, our software analyst collects requirements that later are shared with our team to define project goals, budget and time.

SOW Document

Knowing all your requirements, we prepare a SOW document defining project tasks to be accomplished and or services to be delivered.

UI Design

In this phase, our Software designer creates an unfinished version of the proposed system that contains detail specifications and features of the final product.

Development

The development phase is where our team develops the solution using the best technologies and methodologies to make the system a working system.

Testing

The goal of this phase is to evaluate whether the system has complied with all the outlined requirements and to see that it meets quality standards.

Release

After the system passed the testing phase the system is ready to go live it's ready to be used in a real environment by all end users.

We develop secure solutions, enabling our clients to deliver secured services

- » Low cost based on quantity
- » Draws power from the field created by the reader
- » Read range up to 12 meters

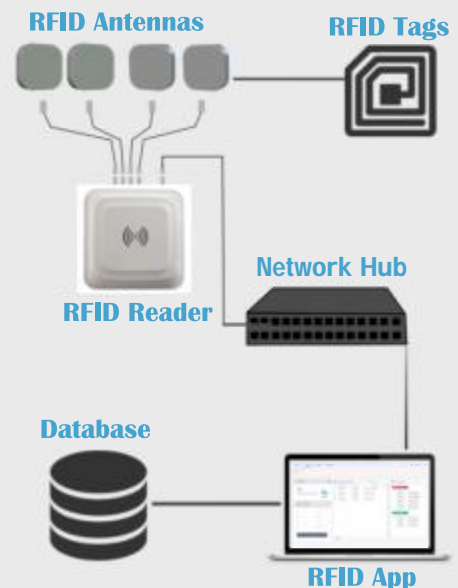

Active Tag

- » Battery powered
- » Read only or read \write
- » Cost driven by power requirement and data capacity
- » Read range: up to 300 meters

Our Capabilities

- » RFID Apps Development
- » RFID Integrations
- » RFID Implementation
- » RFID Research

RFID Data Management Overview

IoT

SMART APPS IGNITE THE IoT

The Internet of Things (IoT) starts with linking together; Networks, Devices, and Data to obtain the benefit of Automation Connectivity and Analytics.

It is predicted that by 2020 more than 28 billion of devices will be connected; Homes, Transportation, Agriculture, Industrial process, HealthCare and other Sectors.

Our knowledge of multiple Technologies, Embedded Systems, Components, and Services enable us to Innovate, Integrate and Develop Applications and Products for your IoT or M2M Projects.

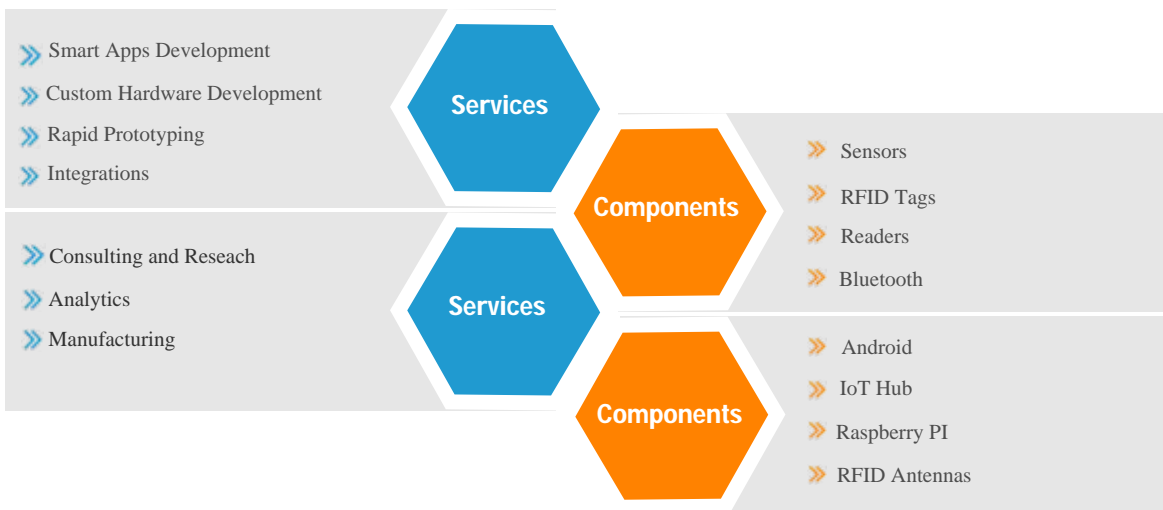

Device Design and Hardware Prototyping

If we cannot find the right hardware for your IoT project, following industry standards our team will Design, Develop and Supervise the manufacture of all IoT devices. Our team will also assist you with pre-certifications services such; FCC, EMC ETL, and more

Our areas of Expertise

ANALYTICS DASHBOARD

BUSINESS INTELIENCE & ANALYTICS

Business Intelligence & Analytics solutions will always derive from key business challenges.

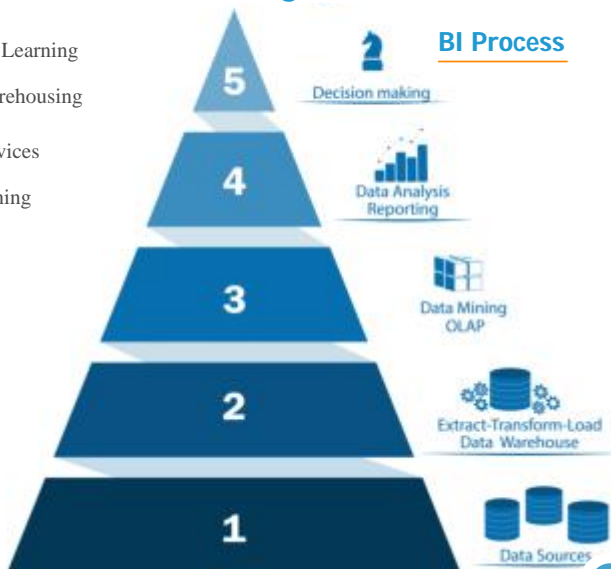

WES BI services and tools focus on helping business to collect and combine raw data from diverse systems across the organization to create valuable insights.
